Minnie Subsystem Top-level Specification

Abstract

The Minnie subsystem is a very-large-scale integration implementation of a specialized sound synthesizer intended for use in the 3600 family product line. This memo provides software and hardware descriptions of that subsystem.

Preface

This memo has two sections:

Section 1, which describes the role the Minnie fulfills in the 3600 Project, and

Section 2, which describes the hardware itself, along with software interface information.
